EDUCATION

Doctor of Philosophy in Physics, Rensselaer Polytechnic Institute **Aug. 2014 – Dec. 2019**
GPA: 3.88 of 4.00 | Relevant Courses: *Quantum Mechanics, Statistical Mechanics* Troy, NY

Bachelor of Science in Physics, Wuhan University **Sep. 2010 – Jun. 2014**
GPA: 3.43 of 4.00 | Relevant Courses: *Advanced Mathematics, Linear Algebra, Probability* Wuhan, China

SKILLS

Programming: Python, MATLAB, SQL, C/C++, Perl

Tools: AWS, Git, Docker, Unix Utilities

Machine Learning: Statistical Modeling, Time Series Forecasting, A/B Testing, Natural Language Processing

EXPERIENCE

Applied Scientist, Amazon | Seattle, WA **May 2022 – Present**

- Designed new features and expanded the existing ones to support both in-cabin and remote voice based car control capabilities across different regions of the world in the Alexa automotive domain.
- Reduced all forms of frictions by building statistical models to derive accurate interpretation of the customer utterances using the latest natural language processing and machine learning technologies.

Data Scientist, Amazon | Bellevue, WA **May 2021 – May 2022**

- Created a one-stop solution to the long-term forecasting problem with highly sparse inputs by designing a novel multivariate encoder-decoder attention model with two-head outputs.
- Setup the data pipeline and deployed the models on native Amazon web service (NAWS) to retrain and make predictions on any given cadence, while continuously monitoring the input data using a model drift detector.

Seismic Imager, CGG | Houston, TX **Jan. 2020 – Feb. 2021**

- Provided optimal quality control for the input seismic raw data by analyzing the statistics from billions of seismic records using SQL and mapping out key metrics using Hadoop/Spark big-data tools.
- Processed petabytes of seismic data by detecting anomalies using sparse transformation, removing seismic echoes using adaptive subtraction, and imputing missing features with compressed sensing techniques.
- Helped the client save almost \$30MM per production well by providing unbiased interpretation of the geological features using machine learning techniques including SVM and boosted trees.

PROJECTS

Open-Source Software Development for Electron Diffraction Image Processing **Jul. 2018 – Dec. 2019**

- Designed the object-oriented architecture, implemented the software with Python (Github repository: [PyRHEED](https://github.com/yux1991/PyRHEED)), and provided technical support to users from several research groups across the world.
- Improved the average computational efficiency of the back-end processing module by about 100 times through NumPy vectorization and CUDA parallel computing.
- Built the data pipeline from raw reflection high energy electron diffraction (RHEED) images to processing-ready datasets through autonomous labeling, noise reduction, standardization and featurization.

RHEED Data Analysis With Machine Learning **May 2016 – Dec. 2019**

- Extracted the three-dimensional probability density distribution of the diffracted electron waves from the preprocessed RHEED datasets by learning the parameters of a Gaussian mixture model.
- Simulated thousands of crystal domains based on the Voronoi tessellation using Monte Carlo methods, in order to be combined with the experimentally extracted features for model parameter estimation.
- Estimated the unknown statistics such as the lattice constant, grain size, and preferred orientations from the RHEED images with a Bayesian regression approach.

AWARDS

The Karen & Lester Gerhardt Prize in Science and Engineering at Rensselaer Polytechnic Institute **May 2020**

Paul S. Ho '65 Prize in Physics at Rensselaer Polytechnic Institute **May 2019**

Hillard B. Huntington Award (1976) at Rensselaer Polytechnic Institute **May 2017**

Presidential Graduate Research Fellowship Award at Rensselaer Polytechnic Institute **Oct. 2015**
